

## GUT FEELING THERE IS ALREADY A BREACH?

Seemingly safe, everyday business activities can open the door to accidental loss, or worse. Do your employees:

- Visit social networking sites?
- Work away from the office?
- Plug in a thumb drive?

Data breaches can be costly and embarrassing, often resulting in:

- Lost business or profits
- Negative publicity
- Litigation or fines

## JURINNOV: NOT JUST YOUR USUAL CONSULTANT

Technology. Like the air we breathe, data is literally all around us, whether we notice it or not. How often do we think about the security of our everyday actions? Most assume they are safe. Yet, unless action is taken, there is no reasonable expectation of security.

### HOW CONFIDENT ARE YOU?

The Confidence Framework is a unique approach to information security. Systems, processes, and policies are surveyed to determine an overall security confidence level. Then,

customized strategies, recommendations, and other solutions guide you toward achieving your information security goals. Finally, periodic audits proactively address emerging threats.

# CONFIDENCE FRAMEWORK

## INFORMATION SECURITY CONSULTING
